

4. Prove that $\frac{1 + \cos \theta + \cos 2\theta}{\sin \theta + \sin 2\theta} = \cot \theta$. (Do *not* leave this blank. Refer to formulas.)

5. If $\sin \theta = -\frac{\sqrt{5}}{5}$ and $\cos \theta$ is negative, what is the exact value of $\tan \theta$?

6. Sketch the graphs of $xy = -4$ and $16x^2 - 4(y - 2)^2 = 64$ on the axes below. Determine the number of points of intersection of the two graphs. (Do not use a calculator.)
